

PolyWorks®

v12

PolyWorks | Talisman™

Bringing PolyWorks
in the palm of your hand

The days of portable 3D metrology operators having to navigate back and forth to their computer during a measurement session are gone. The PolyWorks Universal 3D Metrology Software Platform now comes equipped with PolyWorks/Talisman, a new remote control application for Apple® mobile computing devices (iPod touch®, iPhone®, iPad™), that brings your PolyWorks session in the palm of your hand while measuring on the shop floor.

Select a probing operation

Get intelligent visual guidance

Configure a probing session

Stay connected to your 3D scene

Perform typical probing actions

View single or multiple Digital Readouts

Ultimate security characteristics for ultra-confidential setups

PolyWorks/Talisman communicates with PolyWorks through a local Wi-Fi network that can be secured by network administrators. Aware of the stringent security requirements that its industrial manufacturing customers impose, InnovMetric has designed its remote control app to guarantee total confidentiality under all circumstances:

- PolyWorks/Talisman only connects to a live PolyWorks session and does not connect to the Internet or any other computer
- The communication between the remote control and PolyWorks is encrypted
- No proprietary CAD data is transferred on the remote control
- No numerical measurement values are transferred, only images
- It is not possible to save information - only live connections are allowed
- Network administrators can explicitly restrict usage to a predefined list of device IDs

InnovMetric also supplies instructions to network administrators who wish to disable the built-in camera, the possibility of taking screen captures, or Internet access.

PolyWorks/Talisman is free of charge and can be downloaded from the Apple App Store
